

# Brain Puzzler

**THE BRAIN™**

# PUZZLER™

There is only one solution, designed and programmed by the computer. 170 sequential movements of the rods will return all 8 wedges to the IN position. The rods slide through 8 different levels. Each level is cut-out differently than the other seven levels. When a rod slides in, it re-aligns all the levels into a new pattern. This re-alignment will unlock some of the rods and re-lock others. No more than 2 rods are movable at any given time and only one is the correct move.

Can you discover the correct sequence?  
If you succeed, can you bring all 8 wedges back out again? (Another 170 sequential moves.) A Clue: The program is based on the Gray Binary System. For solution, Send 50 cents and self-addressed stamped envelope.
