Scheme in Scheme: The Metacircular Evaluator
Eval and Apply

CS21b: Structure and Interpretation of Computer Programs
Brandeis University
Spring Term, 2015
The *metacircular evaluator* is

A rendition of Scheme, *in Scheme*, where expressions and environments are just *list structures* that get modified according to fixed rules.

A concise language description (as opposed to, say, English) -- which, of course, you need to know Scheme already to understand.

A kind of *fixed point* of the Scheme interpreter.

*(factorial* is not a fixed point.)*

A straightforward medium to discuss language modifications among language designers

No more complicated than many of the programs we have discussed in class

*What you are about to learn is powerful, secular wizardry. Your life will never be the same again.*
Evaluator -- top level
