

PROGRAM

Data Compression Conference (DCC 2005)

Sponsored by Brandeis University.

Proceedings published by the IEEE Computer Society Press.

Snowbird, Utah

March 29-31, 2005

COMMITTEE:

A. Apostolico – Purdue U. / U. Padova
M. Cohn – Brandeis U.
M. Effros – California Institute of Technology
R. Gray – Stanford U.
S. Hemami – Cornell U.
J. Kovacevic – Carnegie Mellon U.
R. Ladner – U. Washington
T. Linder – Queen's U.
H. Malvar – Microsoft
M. Marcellin – U. Arizona
A. Moffat – U. Melbourne
M. Rabbani – Eastman Kodak
S. Savari – U. Michigan
K. Sayood – U. Nebraska
G. Seroussi – Hewlett-Packard
D. Sheinwald – IBM
J. Storer – Brandeis U.
K. Zeger – U. California San Diego

SCHEDULE OVERVIEW:

Monday Evening, March 28:

Registration and Reception

Tuesday, March 29:

Morning: Technical Sessions
Mid-Day: Invited Presentation
Afternoon: Technical Sessions

Wednesday, March 30:

Morning: Technical Sessions
Mid-Day: Technical Sessions
Afternoon: Poster Session and Reception

Thursday, March 31:

Morning: Technical Sessions

MONDAY EVENING

Registration / Reception, 7:00-10:00pm (Golden Cliff Room)

TUESDAY MORNING

SESSION 1

- 8:00am:** “Near Tightness of the El Gamal and Cover Region for Two Descriptions”. 3
L. Lastras-Montano and V. Castelli
IBM T.J. Watson Research Center
- 8:20am:** “Distributed Source Coding in Dense Sensor Networks” 13
A. Kashyap, L. Lastras-Montano†, C. Xia†, and Z. Liu†
University of Illinois at Urbana-Champaign, †IBM T.J. Watson Research Center
- 8:40am:** “A Generalization of the Rate-Distortion Function for Wyner-Ziv Coding
of Noisy Sources in the Quadratic-Gaussian Case 23
D. Rebollo-Monedero and B. Girod
Stanford University
- 9:00am:** “Towards Practical Minimum-Entropy Universal Decoding” 33
T. Coleman, M. Medard, and M. Effros†
Massachusetts Institute of Technology, †California Institute of Technology
- 9:20am:** “On Multiterminal Source Code Design” 43
Y. Yang, V. Stankovic, Z. Xiong, and W. Zhao
Texas A&M University
- 9:40am:** “On the Performance of Linear Slepian-Wolf Codes
for Correlated Stationary Memoryless Sources” 53
S. Yang and P. Qiu
Zhejiang University

Break: 10:00am - 10:20am

SESSION 2

- 10:20am:** “Real, Tight Frames with Maximal Robustness to Erasures” 63
M. Puschel and J. Kovacevic
Carnegie Mellon University
- 10:40am:** “Adaptive Block-Based Image Coding with Pre-/Post-Filtering” 73
W. Dai, L. Liu, and T. Tran
The Johns Hopkins University
- 11:00am:** “Optimized Prediction for Geometry Compression of Triangle Meshes” .. 83
D. Chen, Y.-J. Chiang, N. Memon, and X. Wu
Polytechnic University
- 11:20am:** “TetStreamer: Compressed Back-to-Front Transmission
of Delaunay Tetrahedra Meshes” 93
U. Bischoff and J. Rossignac
Georgia Institute of Technology
- 11:40am:** “A Point-Set Compression Heuristic for Fiber-Based Certificates
of Authenticity” 103
D. Kirovski
Microsoft Research
- 12:00noon:** “Performance Comparison of Path Matching Algorithms
over Compressed Control Flow Traces” 113
Y. Lin and Y. Zhang
The University of Texas at Dallas

Lunch Break: 12:20pm - 2:30pm

**TUESDAY MID-DAY
INVITED PRESENTATION**

2:30pm - 3:30pm

"Some Open Problems in Source Coding in Biomedical Engineering"

Dr. Elvir Causevic

Founder and President Everest Biomedical Instruments
and
Ad. Assistant Professor, Yale Applied Mathematics

There are two basic types of measurements of quantities in physiologic systems: those that measure quantities that happen spontaneously in the course of normal operation of the system, and those in which we perturb the system with some "friendly" stimulus and record system output as a response, the latter being much more reliable and thus suitable for clinical use. In principle, this is not at all different than what we encounter in communication systems of various types, or target recognition systems, for example. The difference is that instruments in use in clinical practice largely use only the simplest of stimuli (clicks, pulses, sine waves), and rarely employ any of the "advanced" signal design techniques that will maximize signal-to-noise ratio, or otherwise aid in the detection of the response (improving accuracy, reducing acquisition time, covering a wider dynamic range of measurements, etc). Another problem is that complex stimuli, if used, produce an overwhelming amount of response data which needs to be cleverly compressed and mined. Typically measurements of biological systems are highly intercorrelated (in an unknown way) and thus usually low rank and low total information content, which makes them ideal candidates for exploration.

Examples will be drawn from various clinical measurements where known stimuli evoke responses from systems under test - neurologic auditory and visual evoked electrical responses, pulse oximetry for measurement of oxygen saturation of hemoglobin, non-invasive blood analyte detection (glucose, blood gases, electrolytes), and others. Opportunities for application of advanced signal design and signal coding for optimum stimulation and response detection will be presented (without adequate existing solutions), as well as open problems in data mining and compression in biological systems.

The next generation of advanced clinical instruments depends on adequate solutions of these problems.

Break: 3:30 - 4:00pm

TUESDAY AFTERNOON

SESSION 3

- 4:00pm:** “Implementation Cost of the Huffman-Shannon-Fano Code” 123
T. Tjalkens
Eindhoven University of Technology
- 4:20pm:** “Binary Codes for Non-Uniform Sources” 133
A. Moffat and V. Anh
The University of Melbourne
- 4:40pm:** “Fast Decoding of Prefix Encoded Texts” 143
E. Bergman and S. Klein
Bar-Ilan University
- 5:00pm:** “Efficient String Matching Algorithms
for Combinatorial Universal Denoising” 153
S. Chen, S. Diggavi[†], S. Dusad[†], and S. Muthukrishnan
Rutgers University, [†]Swiss Federal Institute of Technology

Break: 5:20pm - 5:40pm

SESSION 4

- 5:40pm:** “Generalizing the Kraft-McMillan Inequality to Restricted Languages” .. 163
M. Golin and H.-S. Na[†]
The Hong Kong University of Science and Technology, [†]Soongsil University
- 6:00pm:** “Asymptotics of the Entropy Rate for a Hidden Markov Process” 173
O. Zuk, I. Kanter[†], and E. Domany
Weizmann Institute of Science, [†]Bar-Ilan University
- 6:20pm:** “Efficient Alphabet Partitioning Algorithms
for Low-Complexity Entropy Coding” 183
A. Said
Hewlett-Packard Labs

WEDNESDAY MORNING

SESSION 5

- 8:00am:** “Design of VQ-Based Hybrid Digital-Analog Joint Source-Channel Codes for Image Communication” 193
Y. Wang, F. Alajaji, and T. Linder
Queen’s University
- 8:20am:** “Hard Decision and Iterative Joint Source Channel Coding Using Arithmetic Codes” 203
L. Xu, M. Hoffman, and K. Sayood
University of Nebraska, Lincoln
- 8:40am:** “Joint Source and Channel Coding Using Trellis Coded CPM: Soft Decoding” 213
Z. Lin and T. Aulin
Chalmers University of Technology
- 9:00am:** “Using 2:1 Shannon Mapping for Joint Source-Channel Coding” 223
F. Hekland, G. Oien, and T. Ramstad
Norwegian University of Science and Technology
- 9:20am:** “On the Entropy Rate of Pattern Processes” 233
G. Gemelos and T. Weissman
Stanford University

Break: 9:40am - 10:00am

SESSION 6

- 10:00am:** “Optimal Quantizer Performance and the Wasserstein Distortion” 243
S. Matloub, D. O’Brien, and R. Gray
Stanford University
- 10:20am:** “Short-Block Variable-Rate Trellis Quantization” 251
T. Eriksson, M. Novak, and J. Anderson
Lund University
- 10:40am:** “A Lagrangian Formulation of Fixed-Rate Quantization and Entropy / Memory Constrained Quantization” 261
R. Gray and J. Gill
Stanford University
- 11:00am:** “Optimal One-Bit Quantization” 270
A. Magnani, A. Ghosh, and R. Gray
Stanford University
- 11:20am:** “Minimum Distortion Color Image Retrieval Based on Lloyd-Clustered Gauss Mixtures” 279
S. Jeong and R. Gray
Stanford University

Lunch Break: 11:40am - 2:00pm

WEDNESDAY MID-DAY

SESSION 7

- 2:00pm:** “When Is Bit Allocation for Predictive Video Coding Easy?” 289
Y. Sermadevi, J. Chen, S. Hemami, and T. Berger
Cornell University
- 2:20pm:** “MINMAX Bit Allocation for Quantization-Based Video Coders” 299
G. Shavit, R. Ladner, and E. Riskin
University of Washington
- 2:40pm:** “Very Low Frame-Rate Video Streaming for Face-to-Face Teleconference” 309
J. Wang and M. Cohen[†]
University of Washington, [†]Microsoft Research
- 3:00pm:** “Error Concealment for Dual Frame Video Coding with Uneven Quality” 319
V. Chellapa, P. Cosman, and G. Voelker
University of California, San Diego
- 3:20pm:** “JPEG2000 and Motion JPEG2000 Content Analysis
Using Codestream Length Information” 329
A. Tabesh, A. Bilgin, K. Krishnan, and M. Marcellin
The University of Arizona

Break: 3:40pm - 4:00pm

WEDNESDAY AFTERNOON

POSTER SESSION AND RECEPTION

4:00-7:00pm

In the Golden Cliff Room

(Titles are listed later in this program;
abstracts of each presentation appear in the proceedings.)

THURSDAY MORNING

SESSION 8

- 8:00am:** “Of Lempel-Ziv-Welch Parses with Refillable Gaps” 338
A. Apostolico
University of Padova, Purdue University
- 8:20am:** “Lossless Data Compression Using Optimal Tree Machines” 348
G. Korodi, J. Rissanen, and I. Tabus
Tampere University of Technology
- 8:40am:** “The Performance of Linear Time Suffix Sorting Algorithms” 358
S. Puglisi, W. Smyth[†], and A. Turpin[‡]
Curtin University of Technology, [†]McMaster University, [‡]University of Melbourne

Break: 9:00am - 9:20am

SESSION 9

- 9:20am:** “Quantization of Multiple Sources Using Integer Bit Allocation” 368
B. Farber and K. Zeger[†]
Fair Isaac Corporation, [†]University of California, San Diego
- 9:40am:** “*n*-Channel Symmetric Multiple-Description Lattice Vector Quantization” 378
J. Ostergaard, J. Jensen, and R. Heusdens
Delft University of Technology
- 10:00am:** “On Global Optimality of Gradient Descent Algorithms for Fixed-Rate Scalar Multiple Description Quantizer Design” 388
S. Dumitrescu and X. Wu
McMaster University
- 10:20am:** “Staggered Lattices in Multiple Description Quantization” 398
C. Tian and S. Hemami
Cornell University

Break: 10:40am - 11:00am

SESSION 10

- 11:00am:** “Fast Precomputed VQ with Optimal Bit Allocation for Lossless Compression of Ultraspectral Sounder Data” 408
B. Huang, A. Ahuja, H.-L. Huang, T. Schmitt[†], and R. Heymann[†]
University of Wisconsin-Madison, [†]NOAA, National Environmental Satellite, Data, and Information Service
- 11:20am:** “Lossless Hyperspectral Image Compression Using Context-Based Conditional Averages” 418
H. Wang, S. Babacan[†], and K. Sayood
University of Nebraska-Lincoln, [†]Northwestern University
- 11:40am:** “A Block-Based Inter-band Lossless Hyperspectral Image Compressor” 427
M. Slyz and L. Zhang[†]
Bitfone Corporation, [†]McMaster University
- 12:00noon:** “Efficient Inter-band Prediction and Wavelet Based Compression for Hyperspectral Imagery: A Distributed Source Coding Approach” 437
C. Tang, N.-M. Cheung, A. Ortega, and C. Raghavendra
University of Southern California

Poster Session

(listed alphabetically by first author)

- “A Fast and Efficient Post BWT-Stage for the Burrows-Wheeler Compression Algorithm” 449
J. Abel
University of Duisburg-Essen
- “Off-Line Compression by Extensible Motifs” 450
A. Apostolico[†], M. Comin[‡], and L. Parida^{}*
[†]Purdue University, [‡]University of Padova, ^{*}IBM T.J. Watson Center
- “An Improved Method for Lossless Data Compression” 451
Y. Bai and T. Cooklev
San Francisco State University
- “The Use of Average Mutual Information Profile as a Species Signature” 452
M. Bauer, S. Schuster[†], and K. Sayood
University of Nebraska-Lincoln, [†]Claremont Colleges
- “Distributed Joint Source-Channel Decoding for Correlated Markov Sources” 453
Q. Chen and K. Subbalakshmi
Stevens Institute of Technology
- “The Markov Expert for Finding Episodes in Time Series” 454
J. Cheng and M. Mitzenmacher
Harvard University
- “Coding the Wavelet Spatial Orientation Tree with Low Computational Complexity” 455
Y. Cho, A. Said[†], and W. Pearlman
Rensselaer Polytechnic Institute, [†]Hewlett-Packard Labs
- “Bounded Size Dictionary Compression: Relaxing the LRU Deletion Heuristic” 456
S. De Agostino
La Sapienza University
- “On the Block Size of Trellis Quantizers” 457
T. Eriksson, S. Hellerbrand[†], J. Anderson, and M. Novak
Lund University, [†]Munich University of Technology
- “Real-Time Traversal in Grammar-Based Compressed Files” 458
L. Gasieniec, R. Kolpakov, I. Potapov, and P. Sant
University of Liverpool
