NOS No. 7 - Seizaine

Many angled cuts for an unusual assembly. Here is what the puzzle maker said:

"With the invention of the NOS (New Old School) puzzle series, Gregory took the six piece burr format and turned it on its head. The only thing more noteworthy than the uniqueness of the series was how difficult they are to make. When he originally send me the plans, I turned him down because it just looked like a nightmare to manufacture.

I changed my mind after handling a couple 3d printed prototypes. These look like traditional six piece burrs but are nothing like them. The angled internal geometry allows for some outrageous movements. They are very confusing and wonderfully different. This is the final three designs to complete the set. Construction was very challenging, requiring the creation of several new jigs and techniques.

"Seizaine" is the seventh and final of the NOS designs and has the highest level. A full sixteen moves; Greg says he used "Love's Dozen" as the base but all I see is crazy angles and some woodworking challenges that were VERY difficult.

Fit is very good, a little loose to account for dry conditions during the period in which it was made. This puzzle is delivered assembled."
