

Augmented Four Corners

Designed, made, and sold by Stewart Coffin in 1970's and early 1980's.

(Cherry and Rosewood, 6 pieces, 4.5 inches;

one of 6 puzzles purchased during a visit with the designer in the early 1980's)

Described in Stewart Coffin's book *The Puzzling World of Polyhedral Dissections*; here is some of what he says in the directions that came with the puzzle:

"The Augmented Four Corners Puzzle consists of six dissimilar interlocking pieces which assemble in one way only, with one sliding axis, to form a geometrical solid with tetrahedral symmetry."

Use the three pieces shown below to put together the top (shown with a rubber band) so that the "legs" that hang down have vertical sides that will slide down onto the other three pieces.
